I.F.E.D.A. MEMBERS INFORMATION ADVICE/UPDATE

From: The National Office

Date: December 2008

Number 25

Lithium Batteries

Dear members, the following may be of interest especially to those of you dealing with fire alarms. Below is a photo of a PPE 9v battery, it was left on the dash of a van whilst the engineer was having a driving break. The heating was on and the sun shining.

Guidance on the battery mentions problems with temperatures above 100 degrees: It appears that (given the right circumstances) there could also be problems at lower temperatures.
