

FIRE DETECTION SYSTEMS & ALARMS – AN INTRODUCTION TO DESIGN

Course information, syllabus and terms & conditions

A one-day theory-based course covering the essential elements regarding BS5839-1. The day finishes with an examination to test comprehension and an ability to navigate the British Standard.

Who is it for:

Alarm technicians, Owners and Managers of Fire Companies, Risk assessors, Fire Safety officers, other enforcing bodies.

COURSE STRUCTURE / SYLLABUS

Section 1: The need for a fire alarm

Section 2: Category and areas protected

Section 3: Variations and non-compliance

Section 4: System components

Section 5: Detection zones

Section 6: System Components and their positioning

Section 7: False alarm management

Section 8: Documentation

Section 9: Examination

LEARNING OUTCOME

Successful candidates will be competent to:

- Establish the need for a fire alarm with the appropriate people
- Understand how to implement the relevant category to a proposed building
- Understand the appropriate use of variations
- Understand the different components available and how to select these to design a compliant system
- Understand about the correct selection, siting and spacing of devices
- Know how to consider power supplies and battery backup
- Understand design consideration to reduce the risk of false and unwanted alarms and have an awareness of the documentation required during the design of a fire alarm and system

It becomes necessary to cancel courses if minimum attendance is not achieved and, in these cases, cancellation is advised 14 days prior to the course start date.
